

AI MODEL CONSISTENCY

Keep the same face in every shot

The full workflow for a model that never changes face.

Comment MODEL

to get this guide sent straight to you.

THE STACK

Midjourney → Magnific → Higgsfield Soul 2.0

Consistency is a system, not luck. Follow these five steps in order and your model holds the same identity from the first image to the final video.

STEP 01 · THE ANCHOR

Build your hero reference face

In Midjourney, generate one strong, front-facing portrait — even lighting, clean background, sharp detail. Write a specific character prompt (age, features, hair, mood) you can reuse word-for-word. Make a batch, pick the strongest, upscale it. This single image is your anchor.

STEP 02 · THE REFERENCE

Lock it as a character reference

Bring that portrait into Magnific and turn on face / character consistency. Feed it as the reference on every new image so the identity carries from shot to shot instead of drifting.

STEP 03 · THE SEED

Fix the seed, change the scene

Keep the same seed and the same prompt skeleton. Only change the setting, wardrobe, pose, and light. The face holds; the world around it changes.

STEP 04 · THE LIBRARY

Build a face library

Render your model from several angles and expressions — front, three-quarter, profile, neutral, smiling. Save them as a set. Now your model exists beyond a single image, and you can reuse the library as reference forever.

STEP 05 · THE MOTION

Animate consistently

When you bring the model to video in Higgsfield Soul 2.0, animate from your locked

reference or library so the motion keeps the same face across every clip.

DON'T BREAK THE FACE

Avoid the common mistakes

- Don't change too many variables at once — that's what breaks the face.
- Keep your lighting language identical across prompts.
- Save your seed + prompt skeleton in a doc so every shoot starts consistent.
- The higher-res your reference, the stronger the consistency.

COPY - PASTE

Your prompt skeleton

```
[same character reference] · [setting] · [wardrobe] · [pose / action] ·  
[lighting] · [lens / style] – consistent face, same model throughout.
```

BEFORE YOU POST

Magnific and Higgsfield rename features often. Check the in-app label for the consistency toggle and adjust if it differs.
